EUR High Yield Bonds

Investment strategy and fund's objective

SCOR Sustainable Euro High Yield is a French FCP invested in Euro denominated high yield bonds. The fund's investment objective is to achieve a performance greater or equal to the "Bloomberg Euro High Yield 3% Issuer Constraint ex financial TR unhedged" index, less management costs with net coupons reinvested, over the recommended investment period, while integrating Environmental, Social and Governance (ESG) criteria.

Key points:

- a diversified portfolio that promotes the generation of cash flows
- investments in Euro denominated securities only
- no investments in bonds issued by financial institutions, nor investments in credit derivatives
- at least 90% of assets in the portfolio benefit from an ESG rating
- the fund does not possess any ISR label

Sustainable investment approach

The SCOR Sustainable Euro High Yield fund follows a sustainable investment process that contains normative and sectoral exclusions and ESG criteria. Through this extra-financial analysis, an ESG rating is assigned to issuers and potential new entries of the portfolio. Securities with an ESG rating will represent at least 90% of the net assets and an average ESG rating is established for each sub-universe of the portfolio. For each sub-universe, the portfolio's ESG rating needs to be superior to the ESG rating of its benchmark index after eliminating at least 20% of the worst performing issuers of said benchmark index. The fund also includes a "best in class" approach concerning four sectors with significant energy consumption: energy, utilities, automotive, and chemicals.

NORMATIVE AND SECTORIAL EXCLUSIONS

Normative exclusions:

- exclusions based on the recommendations of the Financial Action Task Force (FATF),
- exclusions based on the Office of Foreign Assets Control (OFAC) and the French Ministry of Finance,
- exclusions based on the Ottawa Convention and the Oslo Treaty,
- other exclusions based on international applications.

Sectoral exclusions:

- thermal coal business (coal mining, coal-fired power generation, coal plant development),
- oil & gas sector (oil sands, shale oil & gas, arctic oil, upstream, midstream, and downstream),
- tobacco manufacturers.

ESG RATING: ISSUER COVERAGE ^{8,9}

	Fund	Fund index
Issuers with ESG rating	98.90%	95.87%

⁸ In % of the fund's assets excluding cash and monetary UCITS. At least 90% of the fund's net assets need to possess an ESG rating.

⁹ Bloomberg Euro High Yield 3% Issuer Constraint ex Financials TR Unhedged (Bloomberg code: I20845EU Index).

ESG RATING PER SUB-UNIVERSE ^{10,11}

Sub-universe	Fund		Sub-universe
	% NAV	Rating	Index top 80%
Euro High Yield or unrated	92.34%	C	C
Euro Investment Grade	0.65%	C+	C+
Euro Sovereign	-	-	-

¹⁰ The benchmark indices corresponding to the three sub-universes are:

- Euro HY or NR: Bloomberg Euro High Yield ex Financials TR Unhedged (I20845EU);
- Euro Investment Grade: Bloomberg Euro Corporate ex Financials (LECFREU);
- Euro denominated Government Securities: Bloomberg-Barclays Euro Treasury 0-12 Months (LA09TREU).

¹¹ Top 80% = benchmark index of the sub-universe after at least 20% of the lowest rated securities in that benchmark have been eliminated.

If the issuer of the security has an ESG rating from the non-financial data provider, the investment team assigns this rating to the security. If the issuer is not rated, the investment team assigns an ESG rating using an internal methodology consistent with that of the non-financial data provider. If no rating can be assigned, then the investment team will assign the NR (not rated) rating. The ESG rating is updated at least yearly.

The issuer's ESG Rating is based on a single ESG rating scale: ratings ranging from A to D-, with A being the highest possible rating, and D being eliminatory.

A	A-	B+	B	B-	C+	C	C-	D+	D	D-
---	----	----	---	----	----	---	----	----	---	----

The ESG rating range is based on a numerical score from 3.50 to 1.00. 3.50 is considered an excellent score, 1.00 a bad score.

ESG Rating	A	A-	B+	B	B-	C+	C	C-	D+	D	D-
Min score	3.50	3.25	3.00	2.75	2.50	2.25	2.00	1.75	1.50	1.25	1.00

Issuers excluded from the investment universe in application of normative and sectorial exclusions and after excluding securities whose issuers are rated D-:

Number of excluded issuers	% in the index
10	4.19%

ENVIRONMENTAL RATING FOR ENERGY, UTILITIES, AUTOMOTIVE, AND CHEMICALS

Sectors	Fund		Fund index	
	% NAV	Rating	%	Rating
Energy	0.42%	C+	2.43%	C+
Utilities	2.03%	B	4.45%	B-
Automotive	11.38%	C+	11.79%	C
Chemicals	3.79%	C+	4.45%	C

The Environmental Rating of these four sectors is mainly weighted by the following criteria:

- energy: scope 1 of greenhouse gas emissions associated with the issuer's activities, the issuer's policies to preserve air quality, the issuer's wastewater treatment.
- utilities: the energy sources used by the issuer, the percentage of renewable energy used by the issuer, the issuer's water use efficiency.
- automotive: the energy efficiency of the products manufactured by the issuer, the rate of reprocessing of waste associated with the issuer's industrial production, the percentage of vehicles with a low environmental impact produced by the issuer.
- chemicals: the issuer's greenhouse gas emissions, the issuer's greenhouse gas reduction policy and strategy.

The fund applies specific constraints on four sectors with high energy consumption: energy, utilities, automotive, and chemicals.

The average environmental grade per sector of the portfolio needs to be superior to the average environmental grade of the same sector in the benchmark index of the fund.

The portfolio may not be invested in any of the four sectors.

Market review

The Euro High Yield market returned performances of -0.99% in May 2022, bringing YTD performance to -7.90%. The continuous increase in risk premiums since April came to an end in May. The average OAS widened by an additional 65 bps to a peak of 518 bps, before subsiding to 469 bps at the end of the month, representing an excess return of -0.52% in May. Putting Covid to one side, the last time spreads reached 500 bps was in January 2019. Since the start of 2022, the Euro high yield segment has significantly underperformed US high yield over the entire yield curve. In both regions, the performance of long maturities has been more negative (-15% for the euro market) than that of short maturities (-5%).

Central banks are reacting differently to the expected slowdown in growth. While the ECB seems to want to maintain the pace at which it rescinds its accommodative monetary policy, the Fed is ready to slow down. US assets thus posted positive performances, while euro markets performed negatively in May.

European high-yield funds continued to be subject to redemptions, which did not accelerate, however. Redemptions in May totaled EUR 1.4 billion, bringing the total since the start of the year to EUR 7 billion, or nearly 9% of outstandings. Funds still had significant cash, dampening the volume of sales at depressed levels. The average price of Euro high yield bonds is 92% of par. Adjustments to exposure might be delicate given the liquidity situation and deteriorating price spreads. The increase in the proportion of distressed debt since the beginning of the year is concentrated in the consumer discretionary sector, both in high yield bonds and in loans. The sector is directly affected by inflation in energy and industrial raw material prices.

BB-rated corporate hybrids continued to underperform, by 1.70% in May, bringing YTD performance to -10.84%. There were no new primary market issues in May. The BB segment overall reduced its lag, benefiting from a flight to quality within the euro high yield asset class. It posted a performance of -0.66%, vs -1.39% for the B segment and -1.97% on the CCC segment. The yields of the three segments were 4.5%, 6.7% and 10.5%, respectively. Like the May primary issues, the BB segment had an attractive risk/return relationship compared with the other rating categories. Issues were primarily in the BB category. Virtually all spreads tightened by around 50 bps between announcement and final pricing, despite the fragile market, and yield was around 4.375% with high ESG ratings. Issuers included Elis, Volvo and new issuer Huhtamaki, a Nordic packaging company.

Recently published first-quarter results have been mostly positive. Although margins of certain industrial companies narrowed, the top line continued to pick up, because of volumes and because cost increases were passed on to prices to a greater-than-expected extent, as illustrated by Thyssen, Grifols and Elis. Generally, the trend remained very favorable in gaming, which continued to recover, leisure and shipping. Acquisitions (or rumors thereof) also continued to be a support factor, placing the targets among the best performers: Banijay, House of HR, Atalian and Ontex.

Fund manager's comment

The SCOR Sustainable Euro High Yield fund declined by -0.94% in May 2022 (C EUR share), outperforming its benchmark index by +0.05%. Since the start of the year, the fund declined by -7.60% (+0.30% ahead of the index).

The fund's beta, close to 1, was maintained at this level. The proportion of cash and the allocation between rating categories contributed positively, as the fund was overweight in the BB category, in contrast to the B and CCC categories.

Lack of exposure or underweighting in the issuers with the most negative performance was beneficial to the fund, as illustrated by Frigoglass (-23%), Diebold Nixdorf (-17%) and Douglas (-13%). Their weightings in the index are significant, which was the main reason for the fund's relative outperformance in May. Conversely, Kloeckner Pentaplast's poor performance, despite encouraging results in May, and the lack of exposure to Atalian, reduced the fund's performance.

Owing to its selection of securities, the fund outperformed the index in the sectors that suffered this month. The transport sector posted the worst performance, for example. Autostrade has a significant weighting in the index, and its long maturities suffered greatly. The fund also outperformed in retailing, despite its overweighting in this sector (Maxeda short-term, HSE, But).

The fund took part in several primary market issues. Elis 2027 opened the primary market with an attractive OID vs. the secondary market, despite a 62 bps reduction in the proposed yield between the announcement and the pricing. This motivated us to participate. We also took part in the TDC NET 2028 issue, rated BBB- with a yield of more than 5% and a very favorable ESG rating.

In Switzerland, subscriptions or purchases, and sales or transfers of units or shares in a fund are restricted to Qualified Investors only, as per Collective Investment Scheme Act ("CISA"), article 10 paragraph 3. In Switzerland, the Fund Prospectus, the Management Regulations, the Key investor information document (KIID), if need be, as well as annual or semi-annual reports are available free of costs, upon request at the Swiss Representative : BNP Paribas Securities Services, Paris, Zurich Branch, Selnaustrasse 16, 8022 Zurich. Payment Service in Switzerland: BNP Paribas Securities Services, Paris, Zurich Branch.

Main risk factors

Risk of capital loss: There is a risk that the capital initially invested will not be fully recovered on redemption.

Risk linked to discretionary management: The management style is discretionary, which means that the portfolio management company may move away from the composition of the benchmark in accordance with its beliefs concerning issuers or its market anticipations. There is a risk that the Fund will not be invested at all times in the best performing securities and that the Fund's performance will differ significantly from that of the benchmark.

Risk linked to the ESG approach: The consideration of the ESG approach, and more specifically the inclusion of exclusions in the investment selection process, may create a performance bias in relation to the performance of the Fund's Benchmark Index.

Furthermore, the ESG approach is based, on the one hand, on data provided by the ESG data provider selected by the management company and, on the other hand, on an internal analysis of the information provided by issuers that the management company considers to be well-founded or accurate on the day of their establishment.

It should be noted that the SRI strategies of the funds selected (excluding funds managed by the management company) may vary and may not be fully consistent with each other (use of different ESG indicators and/or SRI approaches). Despite this, the Fund does not benefit from the SRI label.

Interest rate risk: Since the portfolio is principally invested in fixed rate securities, Fund unitholders are exposed to interest rate risk. This corresponds to the risk of a fall in value of rate instruments due to interest rate variations and is measured by interest rate sensitivity. In periods of increased interest rates, the net asset value of the Fund may decrease significantly.

Credit risk: Deterioration in the solvency of an issuer may provoke a fall in the value of the securities that it has issued, and subsequently in the net asset value of the Fund. This risk is measured by credit sensitivity. In the event of default on payment, the value of the securities may be zero.

Risk linked to speculative securities: Due to the historically greater risk of default on speculative securities than on non-speculative securities, investment in high yield or non-rated securities may increase the credit risk and may lead to a significant and rapid fall in the net asset value of the Fund.

Emerging market risk: Due to the historically greater risk of default for non-OECD (emerging) securities than for OECD securities, investment in non-OECD (emerging) securities may increase the credit risk and may lead to a significant and rapid fall in the net asset value of the Fund.

Counterparty risk: This risk relates to the possibility of default by a counterparty, leading to payment default. Payment default by a counterparty may lead to a fall in the net asset value of the Fund.

Share market risk: The value of the Fund may fall in the event of a fall in the share market and/or a fall in value of specific securities held by the Fund.

Currency risk: For units denominated in CHF and USD, foreign exchange risk is residual because the units are hedged. The attention of unitholders is drawn to the residual exchange rate risk that would result from imperfect coverage. This risk may decrease the net asset value.

Refer to the fund latest prospectus for the comprehensive list of associated risks.
