Investment strategy and fund's objective

SCOR Sustainable Euro High Yield is a French FCP invested in Euro denominated high yield bonds. The fund's investment objective is to achieve a performance greater or equal to the "Bloomberg Euro High Yield 3% Issuer Constraint ex financial TR unhedged" index, less management costs with net coupons reinvested, over the recommended investment period, while integrating Environmental, Social and Governance (ESG) criteria.

Key points:

- a diversified portfolio that promotes the generation of cash flows
- investments in Euro denominated securities only
- no investments in bonds issued by financial institutions, nor investments in credit derivatives
- at least 90% of assets in the portfolio benefit from an ESG rating
- the fund does not possess any ISR label

Sustainable investment approach

The SCOR Sustainable Euro High Yield fund follows a sustainable investment process that contains normative and sectoral exclusions and ESG criteria. Through this extra-financial analysis, an ESG rating is assigned to issuers and potential new entries of the portfolio. Securities with an ESG rating will represent at least 90% of the net assets and an average ESG rating is established for each sub-universe of the portfolio. For each sub-universe, the portfolio's ESG rating needs to be superior to the ESG rating of its benchmark index after eliminating at least 20% of the worst performing issuers of said benchmark index. The fund also includes a "best in class" approach concerning four sectors with significant energy consumption: energy, utilities, automotive, and chemicals.

NORMATIVE AND SECTORIAL EXCLUSIONS

Normative exclusions:

- exclusions based on the recommendations of the Financial Action Task Force (FATF),
- exclusions based on the Office of Foreign Assets Control (OFAC) and the French Ministry of Finance,
- exclusions based on the Ottawa Convention and the Oslo Treaty,
- other exclusions based on international applications.

Sectoral exclusions:

- thermal coal business (coal mining, coal-fired power generation, coal plant development),
- oil & gas sector (oil sands, shale oil & gas, arctic oil, upstream, midstream, and downstream),
- tobacco manufacturers.

ESG RATING: ISSUER COVERAGE ^{8,9}

	Fund	Fund index
Issuers with ESG rating	99.82%	95.68%

⁸ In % of the fund's assets excluding cash and monetary UCITS. At least 90% of the fund's net assets need to possess an ESG rating.

⁹ Bloomberg Euro High Yield 3% Issuer Constraint ex Financials TR Unhedged (Bloomberg code: I20845EU Index).

ESG RATING PER SUB-UNIVERSE ^{10,11}

Sub-universe	Fund		Sub-universe
	% NAV	Rating	Index top 80%
Euro High Yield or unrated	92.36%	C	C
Euro Investment Grade	0.42%	C+	C+
Euro Sovereign	-	-	-

¹⁰ The benchmark indices corresponding to the three sub-universes are:

- Euro HY or NR: Bloomberg Euro High Yield ex Financials TR Unhedged (I20845EU);
- Euro Investment Grade: Bloomberg Euro Corporate ex Financials (LECFREU);
- Euro denominated Government Securities: Bloomberg-Barclays Euro Treasury 0-12 Months (LA09TREU).

¹¹ Top 80% = benchmark index of the sub-universe after at least 20% of the lowest rated securities in that benchmark have been eliminated.

If the issuer of the security has an ESG rating from the non-financial data provider, the investment team assigns this rating to the security. If the issuer is not rated, the investment team assigns an ESG rating using an internal methodology consistent with that of the non-financial data provider. If no rating can be assigned, then the investment team will assign the NR (not rated) rating. The ESG rating is updated at least yearly.

The issuer's ESG Rating is based on a single ESG rating scale: ratings ranging from A to D-, with A being the highest possible rating, and D being eliminatory.

A	A-	B+	B	B-	C+	C	C-	D+	D	D-
---	----	----	---	----	----	---	----	----	---	----

The ESG rating range is based on a numerical score from 3.50 to 1.00. 3.50 is considered an excellent score, 1.00 a bad score.

ESG Rating	A	A-	B+	B	B-	C+	C	C-	D+	D	D-
Min score	3.50	3.25	3.00	2.75	2.50	2.25	2.00	1.75	1.50	1.25	1.00

Issuers excluded from the investment universe in application of normative and sectorial exclusions and after excluding securities whose issuers are rated D-:

Number of excluded issuers	% in the index
10	4.14%

ENVIRONMENTAL RATING FOR ENERGY, UTILITIES, AUTOMOTIVE, AND CHEMICALS

Sectors	Fund		Fund index	
	% NAV	Rating	%	Rating
Energy	0.42%	C+	2.40%	C+
Utilities	1.97%	B	4.47%	B-
Automotive	11.43%	C+	12.02%	C
Chemicals	3.80%	C+	4.46%	C

The Environmental Rating of these four sectors is mainly weighted by the following criteria:

- energy: scope 1 of greenhouse gas emissions associated with the issuer's activities, the issuer's policies to preserve air quality, the issuer's wastewater treatment.
- utilities: the energy sources used by the issuer, the percentage of renewable energy used by the issuer, the issuer's water use efficiency.
- automotive: the energy efficiency of the products manufactured by the issuer, the rate of reprocessing of waste associated with the issuer's industrial production, the percentage of vehicles with a low environmental impact produced by the issuer.
- chemicals: the issuer's greenhouse gas emissions, the issuer's greenhouse gas reduction policy and strategy.

The fund applies specific constraints on four sectors with high energy consumption: energy, utilities, automotive, and chemicals.

The average environmental grade per sector of the portfolio needs to be superior to the average environmental grade of the same sector in the benchmark index of the fund.

The portfolio may not be invested in any of the four sectors.

Market review

The Euro High Yield market delivered a negative performance -7.01% in June 2022. The widening in spreads gained pace as fears grew the ECB's monetary tightening would trigger stagflation. The average OAS on the Euro High Yield market widened by 179bps to 647bps, representing an excess return of -6.31%. Performance over the second quarter came to negative -10.69%. The worst historical performance of the High Yield Euro for a first half was -14.35% (-9.7% in excess return). The hierarchy between asset classes was restored in June and investment grade outperformed in the first half, at -12.09%.

Redemptions in High Yield funds continued, totaling more than EUR 4 billion in the second quarter and close to EUR 9 billion since the beginning of 2022. The primary market, which is still closed, has recorded EUR 20 billion in gross issues since the start of the year, of which EUR 6.6 billion in the second quarter. If we combine this with the maturities and the coupons paid, the net amount of issues is negative. June's sole issue was linked to Manuchar's (chemicals) LBO by sponsor Lone Star with an 11% yield.

From a rating perspective, CCC-rated issues corrected more sharply in June 2022 as the markets accelerated downwards. Performance was again rating-driven in the second quarter, with CCC-rated issues down -13.61%, while the B and BB-rated segments lost -11.43% and -9.95% respectively. That said, the BB segment includes most of the High Yield hybrid corporates, which again underperformed significantly, delivering a negative return of -11.43% in June, or -15.40% over the second quarter. In addition to the lack of market liquidity and growing extension risk causing yield curves to flatten, this was attributable to the sharp correction in real estate hybrids. Aside from the macro environment, the sector has been affected by growing wariness about Scandinavian and German issues as a result of contagion from Adler and SBB.

In terms of individual issuers, Pro-Gest, a packager that posted very healthy results to end-April 2022, is one of the few to have returned a positive performance in June. Of the largest underperformances, Takko (down 25%), which reported another still weak sequential improvement in its results to end-April, is a concern given the impending maturity of its bonds and the growing difficulty of raising refinancing. Likewise, Mahle (down -18%), an auto parts maker manufacturing thermal engines, has clearly warned the year is likely to be a tough one for EBITDA given the general inflation in its production costs.

The performance of the various sectors has been relatively consistent, excluding underperformance by the media sector caused by its long average duration. As a result, the proportion of so-called distressed debt (priced below 80% of par) soared in June to 27%, while the percentage of "actual distressed debt" was again low. These levels reflect an implied default rate well above recently increased expectations of 2.5% according to Standard & Poor's at year-end 2022, representing default by 20 corporates.

Fund manager's comment

The SCOR Sustainable Euro High Yield fund returned a negative performance of -6.66% in June 2022, 35bps above the benchmark index.

The fund's beta of 96%, unchanged in June, provided a positive relative contribution.

Its allocation per rating is positive, while its overexposure to corporate hybrid debt again cost it relative to the benchmark index. Even so, the ESG exclusions of issuers such as Wintershall (down -16%) and BAT (down -13%) made up for this effect against the index. From a selection perspective, the biggest negative contributions came from the fund's substantial overexposure to Dometic/Faurecia and Ceconomy. That was more than offset by underexposure to Netflix and Ziggo, which have long maturities, and Upfield (down -27%), which has also been affected by higher costs.

We participated in the Huhtamäki 2027 issue, which was announced in May 2022 and priced in early June. We were active at the beginning of the month before the sell-off gained pace, selling bonds that were still trading at high prices, such as the Trivium 2026, Elis 2027 and CMA CGM 2026. We did not participate in the Manuchar issue given its fundamentals amid general market wariness.

Source: SCOR Investment Partners, unless otherwise specified.

In Switzerland, subscriptions or purchases, and sales or transfers of units or shares in a fund are restricted to Qualified Investors only, as per Collective Investment Scheme Act ("CISA"), article 10 paragraph 3. In Switzerland, the Fund Prospectus, the Management Regulations, the Key investor information document (KIID), if need be, as well as annual or semi-annual reports are available free of costs, upon request at the Swiss Representative : BNP Paribas Securities Services, Paris, Zurich Branch, Selnaustrasse 16, 8022 Zurich. Payment Service in Switzerland: BNP Paribas Securities Services, Paris, Zurich Branch.

Main risk factors

Risk of capital loss: There is a risk that the capital initially invested will not be fully recovered on redemption.

Risk linked to discretionary management: The management style is discretionary, which means that the portfolio management company may move away from the composition of the benchmark in accordance with its beliefs concerning issuers or its market anticipations. There is a risk that the Fund will not be invested at all times in the best performing securities and that the Fund's performance will differ significantly from that of the benchmark.

Risk linked to the ESG approach: The consideration of the ESG approach, and more specifically the inclusion of exclusions in the investment selection process, may create a performance bias in relation to the performance of the Fund's Benchmark Index.

Furthermore, the ESG approach is based, on the one hand, on data provided by the ESG data provider selected by the management company and, on the other hand, on an internal analysis of the information provided by issuers that the management company considers to be well-founded or accurate on the day of their establishment.

It should be noted that the SRI strategies of the funds selected (excluding funds managed by the management company) may vary and may not be fully consistent with each other (use of different ESG indicators and/or SRI approaches). Despite this, the Fund does not benefit from the SRI label.

Interest rate risk: Since the portfolio is principally invested in fixed rate securities, Fund unitholders are exposed to interest rate risk. This corresponds to the risk of a fall in value of rate instruments due to interest rate variations and is measured by interest rate sensitivity. In periods of increased interest rates, the net asset value of the Fund may decrease significantly.

Credit risk: Deterioration in the solvency of an issuer may provoke a fall in the value of the securities that it has issued, and subsequently in the net asset value of the Fund. This risk is measured by credit sensitivity. In the event of default on payment, the value of the securities may be zero.

Risk linked to speculative securities: Due to the historically greater risk of default on speculative securities than on non-speculative securities, investment in high yield or non-rated securities may increase the credit risk and may lead to a significant and rapid fall in the net asset value of the Fund.

Emerging market risk: Due to the historically greater risk of default for non-OECD (emerging) securities than for OECD securities, investment in non-OECD (emerging) securities may increase the credit risk and may lead to a significant and rapid fall in the net asset value of the Fund.

Counterparty risk: This risk relates to the possibility of default by a counterparty, leading to payment default. Payment default by a counterparty may lead to a fall in the net asset value of the Fund.

Share market risk: The value of the Fund may fall in the event of a fall in the share market and/or a fall in value of specific securities held by the Fund.

Currency risk: For units denominated in CHF and USD, foreign exchange risk is residual because the units are hedged. The attention of unitholders is drawn to the residual exchange rate risk that would result from imperfect coverage. This risk may decrease the net asset value.

Refer to the fund latest prospectus for the comprehensive list of associated risks.
