### Investment strategy and fund's objective

SCOR Funds - Euro Short Term Duration High Yield invests in the European high yield bond market. The Fund's objective is to achieve an absolute and positive performance over the recommended investment period by investing in fixed and floating coupon bonds and in debt securities classified as speculative with an anticipated maturity less than three years.

#### Key points:

- an investment universe comprising only securities denominated in EUR
- an investment universe comprising only companies from OECD member countries
- fundamental issuer analysis is at the heart of the investment process

## Market review

The Euro High Yield market returned performances of -0.99% in May 2022, bringing YTD performance to -7.90%. The continuous increase in risk premiums since April came to an end in May. The average OAS widened by an additional 65 bps to a peak of 518 bps, before subsiding to 469 bps at the end of the month, representing an excess return of -0.52% in May. Putting Covid to one side, the last time spreads reached 500 bps was in January 2019. Since the start of 2022, the Euro high yield segment has significantly underperformed US high yield over the entire yield curve. In both regions, the performance of long maturities has been more negative (-15% for the euro market) than that of short maturities (-5%).

Central banks are reacting differently to the expected slowdown in growth. While the ECB seems to want to maintain the pace at which it rescinds its accommodative monetary policy, the Fed is ready to slow down. US assets thus posted positive performances, while euro markets performed negatively in May.

European high-yield funds continued to be subject to redemptions, which did not accelerate, however. Redemptions in May totaled EUR 1.4 billion, bringing the total since the start of the year to EUR 7 billion, or nearly 9% of outstandings. Funds still had significant cash, dampening the volume of sales at depressed levels. The average price of Euro high yield bonds is 92% of par. Adjustments to exposure might be delicate given the liquidity situation and deteriorating price spreads. The increase in the proportion of distressed debt since the beginning of the year is concentrated in the consumer discretionary sector, both in high yield bonds and in loans. The sector is directly affected by inflation in energy and industrial raw material prices.

BB-rated corporate hybrids continued to underperform, by 1.70% in May, bringing YTD performance to -10.84%. There were no new primary market issues in May. The BB segment overall reduced its lag, benefiting from a flight to quality within the euro high yield asset class. It posted a performance of -0.66%, vs -1.39% for the B segment and -1.97% on the CCC segment. The yields of the three segments were 4.5%, 6.7% and 10.5%, respectively. Like the May primary issues, the BB segment had an attractive risk/return relationship compared with the other rating categories. Issues were primarily in the BB category. Virtually all spreads tightened by around 50 bps between announcement and final pricing, despite the fragile market, and yield was around 4.375%. Issuers included Elis, Volvo and new issuer Huhtamaki, a Nordic packaging company.

Recently published first-quarter results have been mostly positive. Although margins of certain industrial companies narrowed, the top line continued to pick up, because of volumes and because cost increases were passed on to prices to a greater-than-expected extent, as illustrated by Thyssen, Grifols and Elis. Generally, the trend remained very favorable in gaming, which continued to recover, leisure and shipping. Acquisitions (or rumors thereof) also continued to be a support factor, placing the targets among the best performers: Banijay, House of HR, Atalian and Ontex.

## Fund manager's comment

The SCOR Short Term Duration High Yield fund posted a negative performance of -0.24% in May 2022 and has declined by -2.07% since the start of the year.

The fund's positioning on the short end of the yield curve continued to be beneficial to it, compared with the market as a whole, against a background of rapidly increasing sovereign rates and even though yield curves were flattening. Nearly half of the fund's holdings even posted a positive total performance, such as airlines Lufthansa and Air France, Banijay, Elis and Thyssen, which were buoyed by favorable results and upgrades in full-year forecasts.

Cash remained high and the fund took advantage of opportunities sparingly, as we can expect to see sovereign rates continue to rise in the coming months. We strengthened our position in Volvo and Elis, taking advantage of weakness in their existing bonds when new ones were issued, as well as in Phoenix Pharma 2025, BB+, which was yielding nearly 4%.

## Main risk factors

**Risk of capital loss:** There is a risk that the capital initially invested will not be fully recovered on redemption.

**Risk linked to discretionary management:** The management style is discretionary, which means that the portfolio management company may move away from the composition of the benchmark in accordance with its beliefs concerning issuers or its market anticipations. There is a risk that the Fund will not be invested at all times in the best performing securities and that the Fund's performance will differ significantly from that of the benchmark.

**Interest rate risk:** Since the portfolio is principally invested in fixed rate securities, Fund unitholders are exposed to interest rate risk. This corresponds to the risk of a fall in value of rate instruments due to interest rate variations and is measured by interest rate sensitivity. In periods of increased interest rates, the net asset value of the Fund may decrease significantly.

**Credit risk:** Deterioration in the solvency of an issuer may provoke a fall in the value of the securities that it has issued, and subsequently in the net asset value of the Fund. This risk is measured by credit sensitivity. In the event of default on payment, the value of the securities may be zero.

**Risk linked to speculative securities:** Due to the historically greater risk of default on speculative securities than on non-speculative securities, investment in high yield or non-rated securities may increase the credit risk and may lead to a significant and rapid fall in the net asset value of the Fund.

**Emerging market risk:** Due to the historically greater risk of default for non-OECD (emerging) securities than for OECD securities, investment in non-OECD (emerging) securities may increase the credit risk and may lead to a significant and rapid fall in the net asset value of the Fund.

**Counterparty risk:** This risk relates to the possibility of default by a counterparty, leading to payment default. Payment default by a counterparty may lead to a fall in the net asset value of the Fund.

**Share market risk:** The value of the Fund may fall in the event of a fall in the share market and/or a fall in value of specific securities held by the Fund.

**Currency risk** is hedged, therefore the currency risk is residual. However, it is important to note the residual currency risk that could result from an imperfect hedge. This risk could lead to a fall in net asset value.

Refer to the fund latest prospectus for the comprehensive list of associated risks.
