IMPORTANT INFORMATION

This document is issued by SCOR Investment Partners SE (hereafter SCOR IP), an asset management company with a capital of EUR 15,500,000. SCOR IP is authorised as a Management Company and Alternative Investment Manager (AIFM) in France, regulated by the Autorité des Marchés Financiers (AMF).

This document is provided for information purposes only and contains information, opinions, assumptions and estimates as well as figures that SCOR IP considers to be well-founded or accurate on the date of publication, given the economic, financial or market context at the time. The information contained herein is subject to change without notice.

Past or target performance do not predict future returns. There is no guarantee that positive forecasts will be achieved in the future. The future performance is subject to taxation, which depends on the personal situation of each investor, and which may change in the future. The existence of a registration or approval does not imply that a regulator has determined that these products are suitable for investors.

This document should not be construed as an offer, solicitation to buy or sell, or as investment advice. It is not the basis of a contract or commitment of any nature.

Information in this document is communicated in confidence and must not be copied or reproduced, modified or translated, or distributed without the prior written consent of SCOR IP.

This document is a marketing communication for professional investors only as defined under the Directive 2014/65/EU of 15 May 2014 on markets in financial instruments as amended (MiFID).

Please refer to the countries of registration of each fund and liaise with your financial advisor to find out whether a fund is available in your country and for your investor group.

Before making any investment decision, investors must read the Prospectus, its SFDR Annex, the Key Information Document ("KID") and SFDR Product Website Disclosures, altogether referred to as the "fund documents". These fund documents and information regarding the facilities and the distributor in your country are available on scor-ip.com or upon request to the Management Company.

INTRODUCTION

Through the Insurance-Linked Securities ("ILS") asset class, including catastrophe bonds (cat bonds), financial markets take part in building resilience and accelerating recovery after a disaster such as an earthquake or hurricane.

Like all investment vehicles offered by SCOR Investment Partners, SCOR ILS Fund – Atropos ("Atropos") strictly adheres to SCOR Investment Partners' investment policies.

Currently, there is no standardized market approach to ESG, nor a specific, defined taxonomy for ILS investments. Many investors consider ILS investments to be aligned with sustainable investment goals, largely because the coverage provided directly or indirectly to policyholders allows them to rebuild physical assets (public infrastructure, houses, etc.) that have been damaged or destroyed by natural disasters.

ESG data on transaction counterparties (cedants) remains weak, however, with poor underlying data quality. This is especially true for US or Asian cedants, who represent a substantial part of the investment universe and who generally underperform European cedants in this regard. There is a growing incentive for cedants to take a transparent approach, however, and to publish more detailed data about their ESG policies and practices and their exposure to underlying risks.

As a result, SCOR Investment Partners has, to date, decided to classify its existing ILS funds under Article 6 of the SFDR regulation. However, in line with its commitment to sustainable investing, SCOR Investment Partners is in the process of including ESG criteria in its qualitative assessment of transactions. SCOR Investment Partners should be in a position to establish:

- initiatives to promote responsible insurance and underwriting policies to cedants,
- a strategy for discussion with brokers in order to gather additional information and obtain more transparency from cedants.

I. ALIGNMENT WITH THE PARIS AGREEMENT

Atropos does not have an alignment strategy with the objectives of the Paris Agreement.

For a fund whose objective is to provide coverage against natural disasters, the production of carbon footprint and alignment trajectory data is not currently relevant. The footprint is recovered at the level of the issuer (i.e. mainly insurers and reinsurers) and not that of the bond, and therefore does not accurately reflect the carbon footprint of the fund. For illustrative purposes, however, SCOR Investment Partners has calculated Atropos' carbon footprint.

Nonetheless, SCOR Investment Partners takes climate-related risks into account in the fund's investment strategy.

Analysis of carbon footprint

SCOR Investment Partners has been using Moody's carbon mission estimation since 2023. The provider improved its methodology in 2024.

The resulting snapshot is only one indicator at a given point in time and provides little information on the approach or commitment of the issuers regarding climate risk in general, and risk related to greenhouse gas emissions in particular.

The carbon footprint assessment is based on a certain number of hypotheses and conventions, including the breakdown by type of greenhouse gas emissions:

- Scope 1: direct production of greenhouse gas from fossil fuel consumption,
- Scope 2: indirect production of greenhouse gas from energy consumption, which itself consumes fossil fuels.
- Scope 3: other forms of greenhouse gas production related to the issuer's activities.

Given that the Scope 3 methodology is quickly evolving as well as the heterogeneity of the data associated with Scope 3 emissions, SCOR Investment Partners has decided to focus on Scope 1 and 2, pending more reliable Scope 3 data.

This analysis is carried out annually on the entire portfolio, excluding cash.

CARBON EMISSIONS ASSOCIATED WITH THE PORTFOLIO, SCOPE 1 AND 2 ¹ At 31.12.2024 ²					
Carbon emissions	tCO2e				
Scope 1 financed carbon emissions	452				
Scope 1 financed carbon emissions	1 309				
Total financed carbon emissions	1 762

Climate change and ILS

Climate change leads to physical risks that can be "acute" or "chronic". Physical risks can directly impact households, businesses or governments by causing physical destruction. This destruction may be direct or indirect, for example though supply chain disruption. Changes in water availability and quality, food security and extreme temperature swings can affect the organization of businesses and governments.

Among the risks related to climate change, "acute" physical risks are defined as those risks connected to natural disaster-type events, which include extreme weather events such as tropical windstorms and floods.

"Chronic" physical risks refer to longer-term climate changes that may trigger a sea level rise or recurring heat waves, for example. These risks may require businesses and institutions to make significant and costly adjustments.

The ILS asset class covers acute climate risks as well as other acute risks of natural disasters such as earthquakes or volcanic eruptions. ILS-type financing thus contributes to the financing of reconstruction and therefore also to the common good.

In addition, SCOR undertook strong commitments in its Climate Policy, stemming from its acute awareness of the urgency to act against global warming. As such, SCOR Investment Partners does not to invest in companies or projects involved in the following businesses and sectors:

- the thermal coal sector, whether the companies or projects financed build coal-fired power stations, extract coal or produce electricity from coal. The effective level retained for coal-related activities is 1% of sales. This threshold reflects the uncertainty linked to the quality of the data used, as well as not penalizing issuers about to leave this type of activity.
- the hydrocarbon sector, i.e. companies or financed projects involved in the conventional or nonconventional oil and gas production chain (upstream, midstream, downstream). SCOR Investment Partners uses the Bloomberg classification for these exclusions. The sectors concerned are Oil & Gas, Pipelines and Gas.

II. ALIGNMENT WITH LONG-TERM BIODIVERSITY OBJECTIVES

As of end-December 2024, Atropos was not able to measure the extent to which it adheres to the Convention on Biological Diversity.

As of end-December 2024, Atropos did not analyze its contribution to reducing the principal factors that put pressure on biodiversity as defined by the Intergovernmental Platform on Biodiversity and Ecosystems Services.

SCOR Investment Partners remains attentive to financial market progress and is involved in research related to this topic, in particular through its involvement in the working group dedicated to biodiversity at the Institute for Sustainable Finance (Institut de la Finance durable) and that of the Sustainability Commission of France Invest (Since 2024). Nevertheless, because of the nature of Atropos and its underlying assets, short-term change in this area is unlikely.

III. ESG CRITERIA IN RISK MANAGEMENT

Because of the specificities of the asset class, ILS requires a unique approach in estimating extra-financial impacts. The SCOR Investment Partners teams have therefore chosen to include environmental, social and governance (ESG) criteria in the qualitative assessment of investment opportunities.

Identifying ESG risks

ESG risks are considered in the management of Atropos' assets in the same way as financial risks. This sustainability risk results from climate change (known as "physical risk") or from the way in which companies respond to climate change (known as "transition risk"). Social factors (such as wage disparities, discrimination, poor working conditions, unsafe employee health and safety practices, etc.) and governance factors (such as breaches of international agreements, corruption, fraud, etc.) can also result in sustainability risks.

The level of risk exposure of the companies in which Atropos invests depends on several factors: sector, location, market area, value chain structure and company-specific characteristics. For each of the fund's investments, the ILS investment team follows a qualitative approach aligned with SCOR Investment Partners' criteria. ESG considerations are always considered for ILS investments, but no minimum criteria are strictly applied, apart from the application of exclusions.

Evaluating ESG risks

The investment team integrates ESG criteria into the qualitative assessment of investment opportunities, prior to any investment. This work focuses on two main areas: criteria relating to cedants and criteria relating to transactions. Exclusion policies are applied prior to any initial assessment.

Criteria related to the cedant

A cedent is an entity that obtains coverage, in this case from Atropos, against the occurrence of a disaster. The cedents currently active in the market are mainly insurers, reinsurers, businesses and governments.

Issuers' KYC ("Know Your Client") procedure for an ILS investment includes the following steps:

- verification of the integrity of businesses and the absence of sensitive controversial issues,
- verification of the effective role of businesses in the process of redistribution after an event,
- verification of the integrity of executives.

Currently, the ESG analysis based on cedants is as follows:

• the external ESG rating provider, ISS ESG, currently covers around 46% of the cedants to which SCOR

Investment Partners is exposed (% of AUM). ISS ESG's ESG rating is based on more than 800 indicators, around 90% of which are sector-specific. For each sector, 5 key questions account for more than 50% of the overall weight of the rating.

- SCOR Investment Partners' Sustainable Investment team has developed a rating methodology, based on the methodology of the Sustainable Accounting Standards Board (SASB), through which the objective is to increase the overall coverage of cedants in the medium term.
- where available, the investment team also refers to ESG policies and practices that may be disclosed in the transaction documentation.

Apart from these transactions, the ILS investment team engages in regular discussion with brokers to promote improvement in the level of cedant transparency when ILS transactions are structured.

Meanwhile, in 2023, SCOR Investment Partners has integrated ILS ESG Transparency Initiative. This initiative was created in 2022 by stakeholders in ILS (insurance-linked securities) in order to improve the transparency of cedants in terms of environmental, social and governance (ESG) data on the ILS market. Through this initiative, an ESG questionnaire is systematically sent to cedants emitting catastrophe bonds.

Atropos' assets under management by cedent type are as follows:

ATROPOS FUND COMPOSITION BY CEDENT AT 31.12.2024	OS FUND COMPOSITION BY CEDENT TYPE (% OF NET ASSETS) 2.2024			
Insurers	70.0%			
Corporates	0.5%			
Governments or Public Entities	10.2%			
Reinsurers	12.8%			
Asset managers	6.6%			

The vast majority of the cedents involved in the ILS instruments of Atropos are insurers, reinsurers and businesses.

Transaction criteria

The investment team also attentively examines the structural characteristics of the transactions in which it invests, since they may present several positive ESG aspects:

- ILS transaction collateral can be invested in EBRD and IBRD bonds whose proceeds are directed towards financing green projects, while offering AAA credit quality, instead of investing in US Treasury bonds,
- transactions with a specific purpose or social aspects are regarded favorably. Cat bonds issued by the IBRD, for example, which offer protection against disasters in developing countries that have a significant insurance gap, or transactions initiated by public insurance pools in certain industrialized countries acting as an insurer of last resort (in the United States, FEMA or Florida's Citizens Property

Insurance, for example),

• other characteristics might comply with ESG, such as cat bonds whose freed-up capital is invested in green projects.

Prioritizing ESG risks

SCOR Investment Partners prioritizes ESG criteria according to their relevance by asset class, but also according to the availability and quality of data.

The management team has specifically identified the physical risks associated with climate change as material to Atropos' investment strategy.

The last few years have seen:

- empirical evidence of climate change, such as stronger, slower and wetter storms (Harvey 2017, Hagibis 2018, Ida 2021, Ian 2022) and drastic droughts (forest fires in California),
- the appearance of more serious events such as hurricanes in the Atlantic Ocean or Japanese typhoons,
- significant losses due to secondary hazards such as flooding or forest fires.

In the case of cedants, if they have an ESG rating assigned by the external data provider, ISS ESG, the sustainability risks taken into account are those identified by this provider.

ESG COVERAGE AT 31.12.2024 ³				
Total cedents	94			
Total assets under management (M USD)	2 845			
Cedents rated	41	43.62%		
Assets under management rated (M USD)	1 363	47.93%		

AVERAGE RATINGS AT 31.12.2024 ³			
Max	Average	Min	
2.60	1.88	1.35	

Managing the risks of ESG criteria

Physical risk, transition risk, litigation risk and social and governance risks are taken into account when evaluating issuers. Depending on their relevance, they are identified and analyzed in the analyst's assessment, whether internal or external.

These risks are integrated into the investment process and the risk management process if they prove to be risks that could have a significant negative impact on the investment value and affect the fund's profitability.

The investment team integrates this qualitative ESG assessment into the decision-making process, in which the approach is applied to each tranche of risk exposure (for example, windstorms in Florida) to avoid unintentional bias. For each tranche, based on the fund's investment strategy, a target positioning is defined within a list of comparable investment opportunities. A bottom-up analysis of relative value is then carried out to select the best opportunities in each compartment from both a quantitative and qualitative point of view, while including the qualitative ESG component described above. All other things being equal, an investment opportunity with better ESG characteristics will be favored by the management team thanks to the qualitative analysis carried out. As a result, based on the experience of several years, the investment team has adjusted the investment strategy to adapt to the growing importance of the physical risks associated with climate change:

- reducing portfolio risk where there is evidence of an increase in severity,
- drastically reducing exposure to secondary perils clearly linked to global warming, particularly if they

³ Reported data may be prior to 31.12.2024

SUSTAINABLE INVESTMENT REPORT 2024 - SCOR ILS FUND - ATROPOS

are difficult to model,

• increased prudence in triggering operations based on aggregate annual loss thresholds, which are more exposed to an increase in the frequency of natural events.

SCOR Investment Partners applies normative and sector-specific restrictions in its investment universe in order to align with its values and with the applicable regulations.

SCOR Investment Partners applies to each investment a series of filters and restrictions derived from internal or international standards:

- exclusion of high-risk jurisdictions according to the Financial Action Task Force (FATF), and ad-hoc internal analysis for jurisdictions under close surveillance (FATF) or third countries with insufficient AML/CFT (Anti-Money Laundering / Countering The Financing Of Terrorism) arrangements (European Commission) or non-cooperative countries and territories for tax purposes (European Union),
- Office of Foreign Assets Control (OFAC) sanctions list,
- European lists of sanctions and frozen assets,
- exclusion of companies that have committed serious violations of the United Nations Global Compact (UNGC) or the OECD Guidelines for Multinational Enterprises and have not demonstrated satisfactory corrective action.

With regard to sector exclusions, the methodology aims to exclude sectors considered too harmful and for which more sustainable alternatives exist. In the first place, SCOR Investment Partners does not invest in companies whose activities are related to the following controversial and unconventional weapons:

- compliance with the provisions of the Ottawa Convention (anti-personnel mines) and the Oslo Convention,
- exclusion of companies involved in the production, sale and distribution of controversial weapons (chemical weapons, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons outside the Treaty on the Non-Proliferation of Nuclear Weapons).

Furthermore, as the SCOR group is a signatory to the Tobacco Free Finance Pledge, tobacco manufacturers are excluded from the investment universe of SCOR Investment Partners. Manufacturers of tobacco related products (major components, e-cigarettes, heated tobacco products and smokeless heating devices) are also excluded. In addition, companies with a turnover of more than 15% related to tobacco distribution are excluded.

The ILS asset class excludes transactions involving the surrender of life insurance policies. The profitability of these contracts increases if the longevity of the group of individuals concerned decreases. For ethical reasons, SCOR Investment Partners does not participate in this market segment.

ESG risks and methodology

SCOR Investment Partners measures the financial risks of ILS investments using tools that model losses from natural disasters while considering climate changes. "Acute" physical risks are analyzed for Atropos using disaster models. These models make it possible to simulate fictitious, but probable, natural disasters and assess the resulting potential losses for governments, businesses or households. More specifically, the models calculate destruction rates based on the geographical location of investments. These rates are then used to determine the potential losses suffered by the investments if a natural disaster were to occur.

The expected loss is the estimated average annual capital loss due to payments made by Atropos to cover damages from potential disasters.

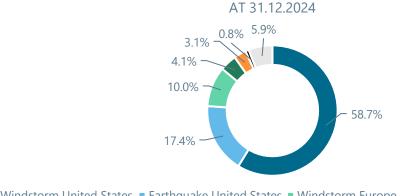

Expected loss is determined using a simulation model for natural disasters. This model simulates 10,000 years of catastrophic events at the global level and generates a capital loss for the portfolio for each of the 10,000 years. The average of these 10,000 years of simulated losses is the expected loss.

Results of the analysis

As of December 31, 2024, the fund's expected loss was 2.75%. This means that on average, without considered the return received in the form of interest on the cat bonds, Atropos expects to give up 2.75% of the value of its assets each year to compensate for damage caused by natural disasters.

Atropos' expected loss breakdown is the following

CONTRIBUTION TO EXPECTED LOSS BY PERIL/REGION (% OF NET ASSETS)

- Windstorm United States Earthquake United States Windstorm Europe
- Tornado United States ■ Earthquake Japan Other

■ Windstorm Japan

SUSTAINABLE INVESTMENT REPORT 2024 - SCOR ILS FUND - ATROPOS

Atropos diversifies its exposure to risk by breaking down its exposure by type of peril (windstorm, earthquake, etc.) and geographical region. Atropos nevertheless reflects the bias of the asset class, which is concentrated in areas where the need for hedging is greatest, namely the United States, Japan and Europe.

The management of Atropos, through its diversification and its choice of participation in financialized reinsurance programs, has made it possible to meet the dual objective of helping to reduce the societal impact of these natural disasters (by enabling the rapid payment of the insurance policies needed to maintain business continuity and to start rebuilding homes and businesses if necessary) while minimizing losses for its investors, thereby enabling them to renew their participation in the reinsurance.

Evolution of the methodology

Providers' standard models are increasingly taking climate change risks into account, especially as the inclusion of a short-term view, in addition to the standard long-term view, better reflects the changes in trends over the last three decades and generally shows a higher expected loss than the long-term view. The models take account of climate change trends in a forward-looking approach, but with a maximum time horizon of five years. The investment team uses a model that is in the process of integrating a real vision of climate change that will simulate the impact of climate change on ILS portfolios based on several global warming trajectories and different time horizons from 2030 to 2080. The ILS team is working closely with its supplier to be among the first clients to implement these additional views of risk as soon as possible.
